

COOL YOUR TURF.

APPLICATIONS

Landscape / home - Enjoy your home and landscape without the maintenance or heat.

Sports - Let the athletes play on level playing ground. No more overheating.

Playgrounds - Healthy outdoor activities and space have never been more important. Keep the kids cool while they play outside.

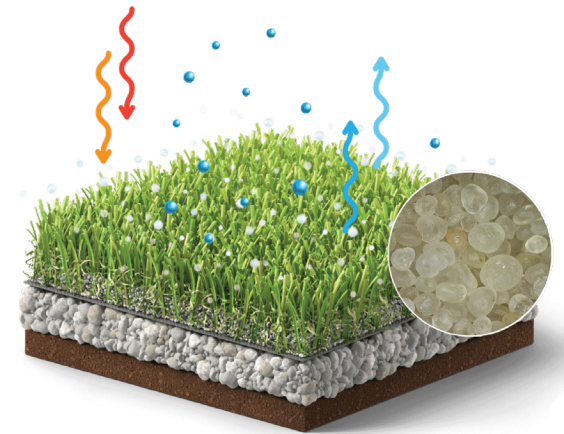

Golf - Stay cool while practicing your short game.

The Coolest, Safest, Performance Infill.

T°Cool is the only technology based synthetic turf infill on the market today. It is 100% non toxic, non hazardous, sustainable, and cools your turf 35°F - 50°F+.

This breakthrough technology dramatically lowers the temperature on synthetic turf surfaces. Reducing friction to help combat skin turf burns. T°Cool makes synthetic turf surfaces safer and more playable for millions.

A SYNTHETIC TURF COOLING SOLUTION

The only proven, effective, and long lasting solution for excessive heat on synthetic turf surfaces.

COOL OFF HOT TURF.

Synthetic turf is great. Less maintenance than natural grass and has the ability to dramatically increase usage without being wed to the task of maintenance. More time to relax and enjoy your lawn, year round.

Unfortunately there has been one issue with artificial grass. The surface has the potential to get hot. The heat problem is a well known issue within the synthetic turf industry. Until now, there has not been an effective, sustainable solution.

At T°Cool we have designed a technology based system to ensure your artificial grass stays cool and lasts longer.

NATURE INSPIRED SOLUTION

T°Cool® works on the same principle as human perspiration. Stored moisture is slowly released from treated sand infill, removing heat energy and allowing the synthetic turf surface to cool.

LONG LASTING & PROVEN

T°Cool has been commercial and validated for 10+ years. With 24,000,000+ sqft installed, T°Cool is the only proven and long lasting cooling system on the market. Unlike Organics, reflective yarn, or other systems claiming to cool, T°Cool's proven cooling lasts and is scientifically backed.

Global Need for Cool Turf.

■ The world can be a hot place. We can help cool it!

No other infill can match T°Cool's long lasting cooling benefit. With 576,000,000+ square feet of artificial grass installed and used annually, there is a compelling need for a cooling solution that actually works.

With T°Cool, synthetic turf is now safer, cooler, and longer lasting.

// T°COOL SAND BENEFITS

PROVEN :

Proven, science backed technology.

COOLER : .

35°F-50°F+ sustained cooling..

ENHANCED PERFORMANCE :

Rounded, spherical, dustless. Turf last longer.

SAFER :

Cooler. Bio Based Antimicrobial.
